R. H. Dalitz and his students
at Oxford 1964 – 1972

Voodoo QCD?

- Constituent quark model
- OZI – rule
- Vector dominance
- QCD sum rules

Voodoo QCD?

- Constituent quark model
- OZI – rule
- Vector dominance
- QCD sum rules

A challenge in the
first decade of QCD

Voodoo QCD?

- Constituent quark model
- OZI – rule

A challenge in the
first decade of QCD

Why bother?

What is the structure of
matter?

GGR & RLJ:

- *Normalizing the Renormalization Group Analysis of Deep Inelastic Leptonproduction*, Phys Lett 93B, 313 (1980).
- *On the Nuclear Dependence of Electroproduction* (with F. E. Close and R. G. Roberts), Phys Lett 143B, 449 (1984).
- *Change of Confinement Scale in Nuclei: Predictions for Structure Functions Confront Electroproduction Data* (with F. E. Close and R. G. Roberts), Phys Rev D31, 1004 (1985).

Basic idea?

- Devolution meets the “stone wall” of confinement.

MIT Bag Model collaboration (Ken Johnson, Thorn, Chodos, Donoghue, Weisskopf, RLJ)

QCD Sum Rules (Shifman, Vainshteyn, Zakharov)

Parton structure functions at low Q^2 (Glück & Reya)

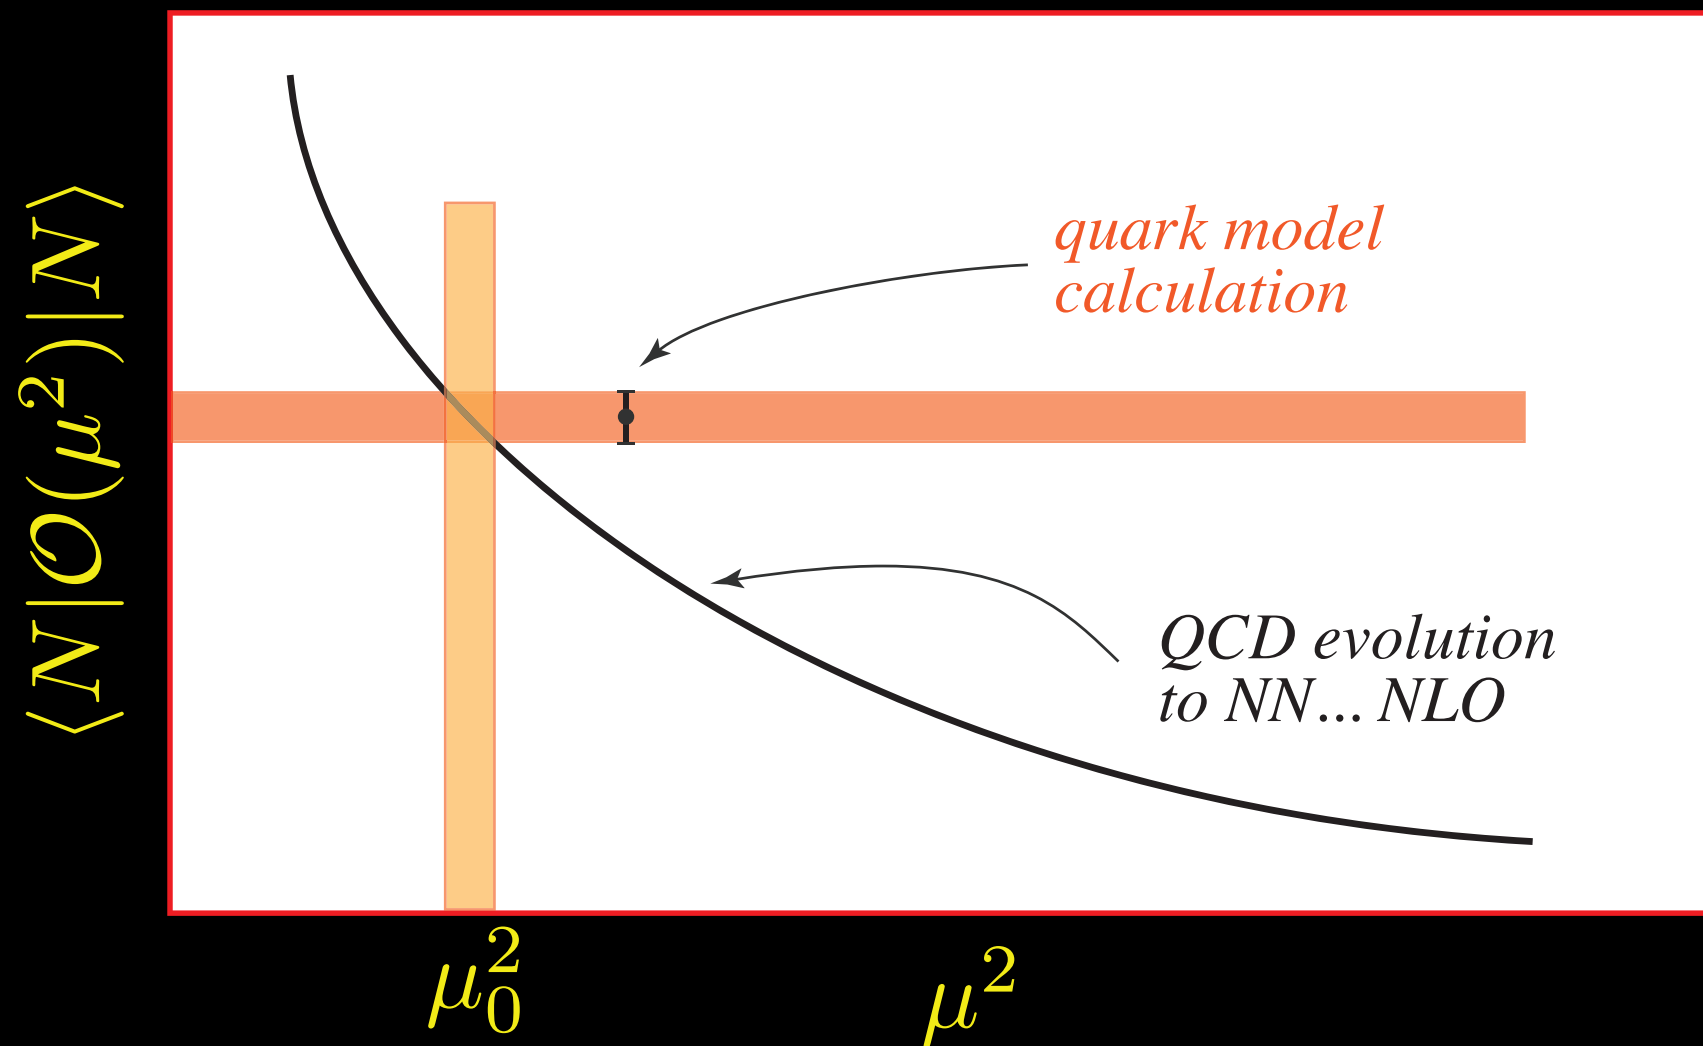

Integrate out long range confining interactions into a “mean field” in which quarks and gluons propagate.

Residual interactions controlled in the infrared

Quark models give hadron matrix elements of scale-dependent operators at an intrinsic, hadronic scale...

Predictions?

Quark model scale should be single parameter.

From GGR & RLJ, Phys Lett 93B, 313 (1980)

Moments of non-singlet DIS structure functions as twist-two quark matrix elements.

30 years later

30 years later

30 years later

- Lattice QCD has displaced heuristic models as the source of information about hadronic bound states.
- But puzzles of voodoo QCD still remain.

30 years later

- Lattice QCD has displaced heuristic models as the source of information about hadronic bound states.
- But puzzles of voodoo QCD still remain.
- For example: Quark model classification of baryons relies on OZI rule and $SU(6) \times O(3)$, and contradict DIS measurements and lattice calculations of spin and flavor content of nucleon.
- And we still have no successful, systematic description of hadron dynamics at the confinement scale!
- Meanwhile, Graham and I moved on to other problems...
